DETAILED ACTION

1. The amendment filed on 12/03/03) has been fully considered and made of record.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Whetstone (US 4,025,379) hereinafter '379.

The '379 teaches a method of producing laminated magnetic core which meets all of applicants' claimed limitations, including the joining of laminations along the longitudinal edges to form a solid core (Cf. Fig. 1) except for the plastically deforming of the laminated cores.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to plastically deform the laminated core since it was known in the art that the core laminations are deformed (Cf. column 5, lines 51-54) to an ultimate shape.

4. Claims 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over the '379

in view of Stark (US 5,563,463) hereinafter '463.

As applied to claim 18, the '379 teaches a method of producing laminated magnetic core which meets all of applicants' claimed limitations including the deburring and shape-deformation; except for the shape-deforming of the core laminations on a common cylinder mantle surface.

The '463 teaches a press-tool of tubular shell to press against the core in a common cylinder mandrel (Cf. Fig. 11a & 11b; column 16, lines 9-14) to an ultimate shape, which is made of solid core laminations (Cf. column 7, line 15; column 8, line 63).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the '379 with the '463 and to modify the method of '379 by applying the common cylinder mandrel as taught by the '463 in order to ensure a fully press-fit laminated core for better magnetic characteristics.

As applied to claim 19, the '463 teaches the step of moving the tool parts toward the core laminations (Cf. Fig. 10 & 11a, element 164).

Claim Allowed

5. Claims 1-14 are allowed.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.
